

Open-Set Acquisition: Next-Phase Report

Evidence date: 2026-09-01. Metadata and permission planning only. No image pixels were downloaded; no request was sent; no model operation was performed.

Class Name	Visually Accepted Photos	Accepted Independent Groups	Accepted But Licence Blocked	Licence Ready Photos	Current Status
stop	0	0	0	0	missing
no_left_turn	1	1	1	0	licence_blocked_and_quantity_weak
maximum_speed_limit_50_kmh	0	0	0	0	missing
no_parking	4	3	4	0	licence_blocked_and_quantity_weak
bus_stop	34	29	34	0	quantity_met_but_licence_blocked

Locked threshold: at least 30 approved photographs and 15 independent groups per class. Visual acceptance is not licence approval.

Mapillary metadata-only discovery

Field	Result
Authentication	Unavailable: no Mapillary token or credential file was present.
Authenticated query	Not run.
Metadata candidates collected	0 for stop, speed-50, no-left-turn, and no-parking; this is an unqueried count, not evidence of absence.
Pixels downloaded	0
Deduplication	Deferred until metadata exist; image ID, sequence ID, capture time/location dependency, and contributor evidence must be retained.
Exact blocker	Create/register a Mapillary application, provide a valid access token outside source control, verify exact India taxonomy mappings, and snapshot current terms before querying.

Official guidance says Mapillary exposes 1,500 traffic-sign map-feature classes and recommends API access for large areas. Traffic-sign features are derived from multiple detections, so multiple associated images must not be treated as independent. The download guide requires Terms compliance. The current Terms page was not readable without login. The official licence help page states imagery is CC BY-SA with per-image attribution.

IRSDBv1.0 request preparation

Source Name	Documented Images	Documented Classes	Physical Sign Grouping	Access Terms	Target Class Availability	Request Status
IRSDBv1.0 Fully Annotated Indian Traffic Signs Database	1692	49	training tracks represent one physical traffic sign	request-only research use for individuals and non-commercial academic laboratories; citation required	unknown until the 49-class manifest is supplied	draft prepared; not sent

The draft requests access, the complete class manifest, per-class physical-track counts, exact target-class confirmation, and explicit permissions for training, crops, private storage, report examples, aggregate metrics, and redistribution limits.

https://www.nitrkl.ac.in/docs/CS/Database/dataset_writeup.pdf

Dataset B licence blocker

e	Doi	Documented Images	Rights Record	Affected Candidates	Licence Status	Experiment Ready Candidates	Request Sta
VQA Dataset B	10.5281/zenodo.17300841	1085 real-world Indian photographs	Zenodo Rights/License field is blank in the inspected record	39 visually accepted: bus_stop 34; no_left_turn 1; no_parking 4	pending_curator_confirmation	0	draft prepare

Zenodo hosts the record but does not own uploaded content; permission depends on the record's Rights/License field. The inspected record shows the License heading without a value. The concise draft asks the listed curators to bind explicit terms to the exact traffic512final.zip files.

GTSRB cross-domain fallback assessment

	Gtsrb Class Id	Class Mapping	Track Count	Fallback Suitability	Reuse Terms	Scientific Limitation
	14	exact semantic class	not measured; official archive was not downloaded in this phase	conditional; verify at least 15 training tracks after deliberate acquisition	official site states data is free to use and requests citation	German sign/domain; cropped sign to support Indian-domain performance
ed_limit_50_km_h	2	exact numeral and semantic class	not measured; official archive was not downloaded in this phase	conditional; verify at least 15 training tracks after deliberate acquisition	official site states data is free to use and requests citation	German sign/domain; cropped sign to support Indian-domain performance

Official GTSRB documentation states that each training track contains 30 frames of one unique physical sign and that the data is free to use with citation requested. Class IDs 14 (STOP) and 2 (speed limit 50 km/h) map exactly. Per-class track counts were not measured because no archive was downloaded. Suitability remains conditional until at least 15 distinct training tracks are verified. Any result must be labelled German cross-domain evidence, never Indian-domain performance.

Per-class acquisition plan

	Visually Accepted Photos	Visually Accepted Independent Groups	Remaining Photo Quantity Gap	Remaining Group Gap	Mapillary Metadata Candidate Count	Irsdb Availability Status	Gtsrb Fallback Availability	Acquisition Readiness
	0	0	30	15	0	unknown_pending_access_request_and_class_manifest	conditional_exact_class_archive_not_acquired	additional_photographs_required
	1	1	29	14	0	unknown_pending_access_request_and_class_manifest	not_applicable	additional_photographs_required
speed_limit_50_km_h	0	0	30	15	0	unknown_pending_access_request_and_class_manifest	conditional_exact_class_archive_not_acquired	additional_photographs_required
	4	3	26	12	0	unknown_pending_access_request_and_class_manifest	not_applicable	additional_photographs_required
	34	29	0	0	0	not_required_for_current_quantity	not_applicable	quantity_met_but_licence_pending

Exact next action: send neither draft yet. First obtain a Mapillary application token through the normal authenticated flow and review the logged-in Terms. Then run an India metadata-only query for the four weak classes, retain all sequence/dependency metadata, and manually verify taxonomy mappings before any pixel-download decision. In parallel, the user may review and send the two prepared permission requests. No metadata candidate is an approved photograph.
