

Mapillary India Metadata Discovery

Authenticated metadata retrieval completed at 2026-09-01T15:58:36+00:00. API metadata requests: 156. Image pixels downloaded: 0. No candidate is visually reviewed or approved.

Object Class	Exact Taxonomy Labels Observed	Raw Feature Image Associations	Retained Unique Image Candidates	Conservative Independent Groups	Dependency Or Duplicate Removals	Metadata Likely Sufficient For Review
	regulatory--stop--g1	15	15	4	0	no
maximum_speed_limit_50_km_h	regulatory--maximum-speed-limit-50--g1	4	4	1	0	no
no_left_turn	regulatory--no-left-turn--g1	5	5	1	0	no
no_parking	regulatory--no-parking--g1;regulatory--no-parking--g2	64	64	13	0	yes

Authentication and exact taxonomy

Authentication succeeded using MAPILLARY_ACCESS_TOKEN in an HTTP authorization header. The token was never placed in a URL, report, output file, or log. Only taxonomy labels beginning with the following exact semantic prefixes were retained:

Project class	Accepted Mapillary taxonomy rule
stop	regulatory--stop--*
maximum_speed_limit_50_km_h	regulatory--maximum-speed-limit-50--*
no_left_turn	regulatory--no-left-turn--*
no_parking	regulatory--no-parking--*

Labels that were merely similar, generic, or missing the exact speed numeral/turn direction were excluded. Metadata candidates remain unapproved photographs.

India-only geographic validation

The scan used one approximately 1.0-km-wide bounding box centred on each of 45 named Indian urban areas. Every retained feature coordinate came from one of these boxes and carries the city evidence in the workbook/CSV. No border-crossing or uncertain-country box was queried. This is a conservative city-centre discovery sample, not an exhaustive census of all Mapillary coverage in India.

Project Class	Search Scope	Retained Unique Image Candidates	Conservative Independent Groups
stop	45 curated urban India boxes; 0 box errors	15	4
maximum_speed_limit_50_km_h	45 curated urban India boxes; 0 box errors	4	1
no_left_turn	45 curated urban India boxes; 0 box errors	5	1
no_parking	45 curated urban India boxes; 0 box errors	64	13

Conservative dependency methodology

All images linked to the same Mapillary map-feature ID are one physical-sign group. Features are also merged when the same image links them, when same-class feature coordinates are within 20 metres, or when features are within 75 metres and share sequence/contributor evidence with capture times within 120 seconds. A whole sequence is not collapsed automatically because one drive can contain multiple physical signs.

Measure	Value
Dependency groups	19
Pixel inspection	not performed
Human approval	not performed
Experiment use	blocked

Quantity analysis and readiness

Project Class	Current Local Accepted Photos	Current Local Accepted Groups	Remaining Photo Target Before Review	Remaining Group Target Before Review	Retained Unique Image Candidates	Conservative Independent Groups	Metadata Likely Sufficient For Pixel Review
stop	0	0	30	15	15	4	no
maximum_speed_limit_50_km_h	0	0	30	15	4	1	no
no_left_turn	1	1	29	14	5	1	no
no_parking	4	3	26	12	64	13	yes

Readiness means only that metadata volume could justify a later pixel-review request. It does not add Mapillary records to the approved-photo totals. The locked requirement remains 30 approved photographs and 15 independent groups per class.

Terms and attribution snapshot

Topic	Finding	Reference	Retrieval Date	Project Implication
Imagery licence	Official Mapillary help states all Mapillary images are shared under CC BY-SA.	https://help.mapillary.com/hc/en-us/articles/115001770409-CC-BY-SA-license-for-open-data	2026-09-01	Later image use requires attribution and share-alike compliance; no pixels were downloaded in this phase.
Attribution	Official example uses image title/link, contributor username/profile link, and CC BY-SA notice.	https://help.mapillary.com/hc/en-us/articles/115001770409-CC-BY-SA-license-for-open-data	2026-09-01	Retain image ID, source link, and contributor metadata before any pixel acquisition.
Map data access	Official guidance supports traffic-sign map features through the API and requires compliance with Terms and Commercial Terms.	https://help.mapillary.com/hc/en-us/articles/4407521157138-Downloading-map-data-via-the-Mapillary-web-app	2026-09-01	Review logged-in current terms before image download or repository/report redistribution decisions.
Repository and report storage	No blanket conclusion was recorded for repository storage or report examples beyond CC BY-SA guidance.	https://www.mapillary.com/terms	2026-09-01	Treat download/storage/report use as pending a deliberate terms review and attribution plan.

No claim is made here that private-repository storage, derived-crop redistribution, or report-image publication is automatically permitted beyond the cited guidance. Those questions require a deliberate logged-in Terms review and an attribution plan before pixels are downloaded.

Exact next action

Review the per-class metadata tables and dependency groups. For classes marked metadata-sufficient, prepare a separate, user-approved pixel-acquisition manifest containing only selected image IDs, required attribution fields, and one or more candidates per conservative group. Before executing it, verify the current logged-in Terms for academic use, report examples, derived crops, and private repository storage. Stop remains in effect: do not download pixels, visually approve candidates, create prototypes, train, calibrate, or evaluate in this phase.
